

AMENDMENTS TO THE SPECIFICATION:

Please amend the specification as follows:

Page 3, replace the paragraph beginning on line 25 with the following amended paragraph:

Referring to Figure 1, an apparatus (2) for imparting relative movement between an oscillating member (~~not shown~~) (3) and a rail (4), in accordance with the invention, is shown. This embodiment of the apparatus (2) is for the advance of ~~[[an]]~~ the oscillating member (3) along the rail (4).

Page 4, replace the paragraph beginning on 27 with the following amended paragraph:

In use, the housing (6) is secured to an oscillating member (3) of a machine driven to have an oscillatory motion (~~not shown~~), such as a percussion rock drill. In the case of a rock drill, the rail (4) is secured in spaced apart relationship to the footwall of a mining tunnel and in line with the direction in which movement is required. This is also in line with the oscillation of the drill. The lever (18) is engaged with the rail (4) by its engaging formation (20).
